

Reverse Osmosis Filter Guide

At Lancaster Water Group we recommend whole home pre-treatment for all ROs to increase the lifespan of the filters. It is not necessary for the RO to operate properly but it can decrease the service frequency of the ROs.

With proper whole home pre-treatment, Lancaster Water Group recommends the following replacement time frame.

Membrane: 1-2 years

Pre-Filter: 1 year

Post-Filter: 1 year

In-Line Filter: 1 Year

Replacement Filters

Replacement Filters:

RO Model: 7-LRO-35

Membrane: S1448RS

Pre Filter: S7128

Post Filter: S7125

In-Line Filter: S7206W-JG

RO Model: 7-CRO-350

Note: This complete model is discontinued.

Parts are still available.

Membrane: S1229RS

Pre Filter: S7028

Post Filter: S7025

RO Model: 7-TFC-50

Membrane: TFM-50

Pre Filter: 210-C25-MB

Post Filter: 210-C5-CA

In-Line Filter: AIRCO

Optional In-Line Filter for all ROs.

Some customers find that due to the lack of minerals in the water the taste of RO water is not as robust as they would like. Lancaster does offer an optional In-Line Filter that can be added to systems without a current in-line filter or replace current in-line filters. These filters add minerals back into the water to enhance taste and flavor of the water.
