

## Ultraviolet Light Guide

At Lancaster Water Group we recommend whole home pre-treatment and sediment filtration before all UV Lights to ensure the effectiveness of the ultraviolet light.

With proper whole home pre-treatment, Lancaster Water Group recommends the following replacement time frame.

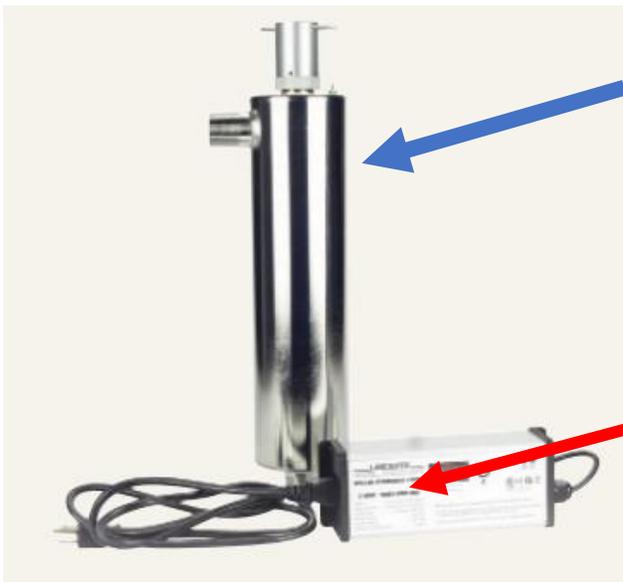

**UV Bulbs – Yearly**

**Quartz Tube – Cleaned Yearly / Replace If Damaged or Cannot be Cleaned.**

**Pre-Filter** (only 7-LWT-UV410-009) – **Yearly**

**IMPORTANT NOTE:** Lancaster Water Group does not sell to any online retailers. Online retailers often sell counterfeit bulbs, using a non-OEM part voids the warranty on the UV system. Please reach out to the installation contractor or plumbing wholesaler to replace your UV parts.

## Identify Your UV Light

Model Number and Serial Code are located opposite side of the 90-degree elbow. The model information is etched into the stainless-steel housing.

7-UVC is not the model number of the system but the replacement part number of the ballast
